

## HOW IT WORKS

From your online Customer Portal account, manage employees, containers, piece rates, and other harvest settings.

Use the Registration Station app on a Windows PC to assign Employee Badges and create Configuration Cards to program the Weighing Station with specific harvest and container settings.

During harvest, Pickers weigh produce at a Weighing Station and receive credit for produce picked when they scan their Employee Badges. The Weighing Station records other harvest information including date, time, and GPS locations.

After harvest, bring the Weighing Station back to a location with the 2nd Sight Router and power for charging. Data transfers wirelessly through the router to the internet via Wi-Fi or through the router, onto the Ruggedized Handheld Computer, then to a location with a Wi-Fi internet network.

View uploaded data online via your Customer Portal account. Download Weigh Log, Daily, and Pay Period reports. Import CSV files into most accounting/ payroll software packages.
