

MAV

Multifunctional Agriculture Vehicle

Automation

Better Twine

Use biotwine for improved strength and reliability. It is biodegradable when composted or tilled into the soil. This uniform, lightweight, and eco-friendly twine is tough, packaged in spools for easy handling, and amenable to automation.

Increase Profits

Labor costs are rising. Automate twining, staking, and top-cutting jobs which are labor intensive and expensive. The savings will hit your bottom line quickly!

Service & Support

A comprehensive service plan ensures on-time twining, system expertise, pre- and post-season maintenance, and peace of mind.

No More Labor Headaches

Sourcing skilled labor to twine and stake is becoming more difficult each year. Eliminate the hassle of recruiting workers and negotiating rates with labor crews and contractors.

MAV

Twine - Stake - Top Cut

The hydraulic basket can be raised or lowered to bring workers closer to the wires, providing a stable platform for trellis maintenance.

When Twiners are engaged, the MAV automatically travels at a constant operating speed to tie knots at a set programmed distance.

Features

- Top Cutter attachments
- Twiner attachments
- Staker modules
- All-Wheel drive
- Elevated platform

Benefits

- Easy twine loading
- Stronger knots, less breakage
- Uniform ties, less twine waste
- Excellent maintenance and service
- Requires one operator, huge labor savings
